	<i>List of tables</i>	xi
	<i>Preface</i>	xii
<b>1</b>	<b>Invariance and quantization of charges and currents</b>	<b>1</b>
1.1	Polarization, adiabatic currents, and surface charge	4
1.1.1	Surface charge	6
1.1.2	Adiabatic loop and charge pumping	11
1.1.3	Slow spatial variation in a supercell	14
1.1.4	Fictitious physics of classical point charges	15
1.1.5	Robustness against weak interactions	18
1.2	Orbital magnetization and surface currents	20
1.3	Edge channels and anomalous Hall conductivity	23
1.3.1	Edge channels	23
1.3.2	Anomalous Hall conductivity	26
1.4	Discussion	30
<b>2</b>	<b>Review of electronic structure theory</b>	<b>33</b>
2.1	Electronic Hamiltonian and Bloch functions	33
2.1.1	Reduction to a single-particle Hamiltonian	33
2.1.2	Spin, spin-orbit coupling, and external fields	37
2.1.3	Crystal potential, Bloch's theorem, and reciprocal space	38
2.1.4	Electron counting	41
2.1.5	Cell-periodic Bloch functions	42
2.2	Tight-binding model Hamiltonians	43
2.2.1	Finite systems	44
2.2.2	The PYTHTB package	48
2.2.3	Extended systems	50

2.2.4	Examples	53
2.3	Linear response theory	56
<b>3</b>	<b>Berry phases and curvatures</b>	61
3.1	Berry phase, gauge freedom, and parallel transport	61
3.1.1	Discrete formulation	62
3.1.2	Continuous formulation and Berry potential	66
3.1.3	An example	70
3.2	Berry curvature and the Chern theorem	73
3.2.1	Berry curvature	73
3.2.2	Chern theorem	75
3.3	Adiabatic dynamics	79
3.4	Berryology of the Brillouin zone	83
3.5	Wannier functions	90
3.5.1	Properties of the Wannier functions	92
3.5.2	Gauge freedom	97
3.6	Multiband formulation	98
3.6.1	Multiband Wannier functions	99
3.6.2	Multiband parallel transport	103
3.6.3	Multiband Berry potentials and curvatures	107
<b>4</b>	<b>Electric polarization</b>	111
4.1	Statement of the problem	111
4.2	Berry-phase theory of polarization	115
4.2.1	First-order change in polarization	116
4.2.2	Change of polarization on an adiabatic path	120
4.2.3	Quantized diabatic charge transport in 1D	125
4.2.4	Historical development	126
4.3	Discussion	126
4.3.1	The quantum of polarization	127
4.3.2	Ionic contribution and origin dependence	131
4.3.3	Relation to Wannier charge centers	132
4.3.4	Practicalities	134
4.4	Questions of interpretation	138
4.4.1	How is polarization measured?	139
4.4.2	“Formal” vs. “effective” polarization	141
4.4.3	Symmetry considerations	143
4.5	Surface charge theorem	146
4.6	Uniform electric fields	147
<b>5</b>	<b>Anomalous Hall conductivity</b>	148
5.1	Introduction	148

5.2	Intrinsic AHC in terms of Berry curvature and Berry phase	148
5.3	Quantum anomalous Hall insulator	148
<b>6</b>	<b>Topological insulators</b>	149
6.1	Quantum anomalous Hall insulator	149
6.2	Quantum spin Hall insulator	149
6.3	3D $Z_2$ topological insulator	149
6.4	4D second-Chern insulator	150
<b>7</b>	<b>Orbital magnetization</b>	151
7.1	Statement of the problem	151
7.2	Derivation in the Wannier representation	151
7.3	General expression	151
7.4	Discussion	151
<b>8</b>	<b>Orbital magnetoelectric coupling</b>	152
8.1	The linear magnetoelectric tensor	152
8.2	Axion electrodynamics	152
8.3	The Chern-Simons theta coupling	152
8.4	Relation to surface anomalous Hall conductivity	152
<b>9</b>	<b>Summary and prospects</b>	153
<b>Appendix A The PythTB package</b>		155
	Introduction	155
	PYTHTB extensions module	155
	Example PYTHTB programs	156
<b>Appendix B Fourier transform conventions</b>		159
<b>Appendix C Quantum metric and Born-Oppenheimer dynamics</b>		160
<b>Appendix D Systems of units</b>		161
